Susie Im

AX Engineer · AI Transformation Engineer

Clear purpose, bold methods.

susie.djqan@gmail.com · github.com/errorinusermane · linkedin.com/in/susie-im-8b9050270

AX engineer who has worked as both planner and developer. Defines why the work matters, tries methods from outside the role, keeps what fits and documents it for reuse. Most recently built Ppang with 2 months of planning and 1 day of AI-driven implementation.

PROJECTS

Ppang Aug 2026–present
Cross-border group settlement app · Solo, planning & development
Groups with mixed nationalities and currencies split costs in USDC by entering only the total and the recipient
- Defined the settlement problem; cut required input to two fields (total, recipient)
- Kept the scope on settlement despite feedback pushing remittance and AI features; moved to non-custodial after regulatory review
- Adopted USDC, studied in a blockchain society, so groups can split costs without currency exchange
- Wrote the spec and handoff docs (35 decisions) myself; an AI coding agent built it in 1 day → 282 tests passed at the end of that run, transfers verified on Base Sepolia testnet
- Fixed 2 pre-deployment violations (e.g. full wallet addresses in logs) found by a review agent kept separate from the build; adopted AI-proposed rules, wallet choice (1 of 7) and no delegated signing after review

Automation system Jul 2026–present
Trading bot & assistant bot · Personal
Trading bot plus an assistant bot sending daily paper digests, on one server
- Added a pre-deployment validation step after a backtest look-ahead bug caused live losses in the first bot
- Rebuilt on one EC2 instance (~$13.5/mo) with dry-run mode, OIDC instead of static AWS keys, logs, dashboard and Telegram alerts
- Daily digests via Gemini API batch calls

SyncMe 2026
Mood journal web service · Sole planner, backend
Enter three numbers about your day and your character changes
- Planned it solo; built OAuth login, friends and comments APIs (Java Spring · Lambda)
- Intent wasn't shared and dev lagged → one shared context doc in later projects

ProofIN 2025–2026
Rental damage record service · Idea, smart contracts, backend, deployment
Records a home's condition at move-in as a tamper-proof record to reduce deposit disputes
- Reframed the problem from AI damage guides to tenants' fear of losing deposits
- Re-aligned diverging goals (AI · disputes · proof); meetings 2–3 h → under 30 min
- Chose Lambda over Fundit's always-on EC2 + RDS; monthly cost cut to about 1/10
- Deployed solo after teammates left; Excellence Award, RISE 2025 (Nov 2025)

Fundit 2025
Insurance crowdfunding service · Smart contracts, backend, app
Users crowdfund the insurance they want, insurers bid, smart contracts close the deal
- Dev began before planning and views diverged → plan first, then build
- Grand Prize, BNB Chain Ideathon (Jul 2025)

OTHER AWARDS

Encouragement Award, Korea Univ. Blockchain Startup Idea Competition (May 2025) · Honorable Mention, DB Financial Economics Competition · Encouragement Award, National Data Mentoring Competition

ACTIVITIES

Saenal Philosophy Society President — museum-visit retreats, participation +10% · **FSTS** — published the retrospective solo

EXPERIENCE

Econ. & Business Research Institute 2023
Part-time
- Automated data entry with Excel queries: 2-day task in half a day; 2-person week alone in 3.5 days

Blockwave 2025
Quant Developer
- Collected token unlock data; built an unlock-calendar trend bot

DATA · AI · REVIEW

School-rules RAG chatbot Fall 2024
NLP course · team
- Owned parsing, retrieval and prompts; accuracy 10% → 80% (10-q sample), 72% on final 50

ebook-to-bgm Fall 2025
Generative AI course · team
- Compared 3 music models; trained a correction model on my listening scores

Netflix clone Spring 2025
Team
- Reviewed teammates' code, merged separate DTOs/pages, owned deployment

EDUCATION

Ewha Womans University Exp. Feb 2027
- Major: Business · Minors: Philosophy, Korean Language & Literature
- Double majors: Economics, Statistics, Sci. & Tech. Management, Public Leadership & Justice

SKILLS

AI dev Claude Code (rules, stop conditions, sub-agents), Gemini CLI/API

Backend Node.js, Java Spring, Python, Supabase

Cloud AWS (EC2 · Lambda · ECR · DynamoDB · RDS · IAM), Docker, GitHub Actions (OIDC)

Data & AI RAG, Hugging Face, evaluation design, SCM · VECM

Integrations exchange APIs, Google OAuth, Telegram, Coinbase CDP

Blockchain Solidity · Hardhat (hackathon MVP stage), Base Sepolia
